

Calculus II
Homework Two
Due Friday 16 February, 2009

Chapter 5.2:

1. 1
2. 7
3. 9
4. 19
5. 28
6. 29

Chapter 5.3:

1. 6
2. 10
3. 14
4. 23

Use Maple to do the following:

1. Determine the sum of the first 100 integers.
2. Determine the sum of the first 100 squares. I.e., $1 + 4 + 9 + 16 + \dots + (99)^2 + (100)^2$.
3. Consider the following sum:

$$\frac{4}{1} - \frac{4}{3} + \frac{4}{5} - \frac{4}{7} + \frac{4}{9} + \dots \quad (1)$$

Determine the value of this sum if it include 10,000 terms. Determine the value of the sum if it include one million terms. Does this number look familiar?
