

Introductions and Questions

Physics and Mathematics of Sustainable Energy

College of the Atlantic. September 12, 2019

Please introduce yourselves to your partner(s).

Discuss these questions and write down some responses. You'll get an opportunity to share some responses with the class. Don't worry if you don't get to all three questions.

I'm going to collect these and type up and share responses (anonymously) with the class. If you write down something that you don't want me to share, please make a note to this effect. Thanks.

1. What questions do you have about sustainable energy, large or small? What are you curious about?
2. What hopes do you have about sustainable energy? What are you optimistic about? What excites you?
3. What concerns do you have about sustainable energy? What are you worried about or scared of?
